

Rising Beyond Borders

Document 05 — Our Impact Master Specification

Purpose: Define the complete information architecture, content model, UI structure and implementation rules for the Our Impact experience without publishing unverified impact claims.

Primary route: /impact

Related routes: /impact/where-we-work, /impact/our-approach, /stories, /about/transparency

Status: Master specification for Claude Code implementation

Source basis: RBB Annual Report / presentation materials and the approved website architecture from Documents 01–04.

1. Document Objective

Our Impact should demonstrate what Rising Beyond Borders has achieved, where its work reaches, how its work is approached, and how impact evidence can be understood. The experience must feel credible and evidence-led while remaining honest about the information currently available.

This document defines the structure now. Where RBB has not supplied verified data, the interface must use an explicit content placeholder rather than inventing countries, beneficiaries, outcomes, methodologies, stories, partners or statistics.

Core rule: **structure can be complete even when verified impact content is not yet complete.**

2. Source-Confirmed Impact Content

Confirmed headline figures supplied in the RBB materials

Metric	Source-supplied value	Implementation status
Lives impacted	50K+	Can be displayed, but RBB should verify before final publication.
Countries reached	25	Can be displayed, but RBB should verify before final publication.
Partners & donors worldwide	200+	Can be displayed, but RBB should verify before final publication.
Additional figure	120+	Do not publish until RBB clarifies what this figure represents.

The supplied materials contain a conflict around the 120+ figure: it appears alongside impact information but its exact meaning is not consistently established. Do not infer its meaning.

3. Information Architecture

3.1 /impact — Impact Overview

- **Hero:** clear impact-led introduction with a concise supporting statement.
- **Impact at a Glance:** approved headline metrics presented as a reusable data-driven component.
- **Program Impact:** four program areas linked to Our Work; detailed figures remain placeholders until supplied.
- **Where We Work:** teaser linking to /impact/where-we-work; no invented geography.
- **Our Approach:** teaser linking to /impact/our-approach; clearly separate proposed language from approved RBB content.

- **Impact Stories:** real, approved stories only; otherwise an explicit empty state.
- **Evidence / Measurement:** explain the structure for future methodology and evidence without inventing a measurement system.
- **Reports & Transparency:** link to existing transparency/report content.
- **Closing CTA:** routes to Get Involved, Our Work and/or Donate.

3.2 /impact/where-we-work

- Purpose: present verified countries/regions where RBB has worked or currently works.
- Use a map only when verified geography is available.
- Until country data is supplied, show a clear placeholder such as: “Where We Work information to be provided and reviewed by Rising Beyond Borders.”
- Do not turn “25 countries reached” into a list of countries.
- Do not infer geography from old/inherited website content.

3.3 /impact/our-approach

- Purpose: explain how RBB works to create sustainable growth and lasting change.
- The supplied source supports the concepts of resources, support, opportunities, sustainable growth and lasting change.
- Do not present “Listen → Partner → Act → Sustain” as an official RBB methodology unless RBB approves it.
- Use a placeholder for the detailed approach until RBB provides approved language.

3.4 Impact Stories

- Use the existing Stories architecture rather than creating a second unrelated story system.
- Only approved real stories may be published.
- Cards should gracefully handle missing image, category or excerpt.
- No fabricated testimonials, beneficiary quotations, locations or outcomes.

4. /impact Page — Detailed Section Order

01 — Impact Hero

Impact-focused headline, short introduction, optional approved supporting media.

02 — Impact at a Glance

50K+, 25, and 200+ as data-driven metrics subject to RBB verification; exclude 120+ until clarified.

03 — Impact Across Our Work

Four program rows/cards connected to Education, Health & Wellbeing, Livelihoods and Community Support.

04 — Where We Work

Verified geography module or explicit empty state.

05 — Our Approach

Approved explanation of how RBB works; proposed framework must remain clearly marked until approved.

06 — Evidence & Measurement

Future-ready evidence model; no invented methodology.

07 — Impact Stories

Approved stories only, connected to Stories.

08 — Reports & Transparency

Links to Annual Reports / Financial Information / Governance where available.

09 — Closing CTA

Encourage users to explore work, get involved or donate.

5. Data Architecture

Create a single source of truth for impact content. Do not hard-code the same metric or program information independently across multiple components.

Recommended shape:

```
impact = {  
  metrics: [{ id, label, value, description, status }],  
  programImpact: [{ programId, summary, metrics, status }],  
  geography: { summary, countries, regions, status },  
  approach: { intro, principles, status },  
  measurement: { intro, methods, evidence, status },  
  stories: [storyId],  
  reports: [{ title, type, url, year, status }]  
}
```

Use explicit content status values such as **verified**, **pending-review**, and **placeholder**. The UI should never expose internal implementation labels unless intentionally designed as an editorial/admin feature.

6. Relationship With Existing Data

- Our Work remains the source of truth for the four program areas and future verified projects.
- Impact should reference program IDs rather than duplicate program names/descriptions.
- Stories should reference the existing Stories content model where possible.
- Transparency links should reuse the existing About / Transparency architecture.
- Homepage impact metrics should consume the same approved impact data rather than maintaining a separate copy.

7. Content Governance

Allowed now

- The source-supplied positioning around sustainable growth and lasting change.
- The four approved program names.
- The source-supplied 50K+, 25, and 200+ figures, clearly marked in implementation as requiring RBB verification before final publication.
- Structural placeholders for missing geography, stories, methodology, program-level outcomes and evidence.

Must not be invented

- Country names or geographic distribution.
- Beneficiary demographics.
- Project outcomes or success percentages.
- Medical, educational or economic outcome claims.
- Specific measurement methodologies.

- Testimonials or quotations.
- Partners, donors or institutional relationships.
- Audit, certification, registration or regulatory claims.
- Dates, campaign history or historical impact claims not present in approved RBB material.

8. Visual & UX Direction

- Continue the established RBB identity: Deep Trust Blue #10437C, Bright Sky Blue #00ADEF, Light Gray #F5F7FA, White #FFFFFF, Charcoal #3A3A3A, Growth Green #5CB85C.
- Continue Satoshi as the primary typeface with the established fallback.
- Use strong editorial hierarchy and generous whitespace.
- Metrics should be visually prominent but not presented as decorative numbers without context.
- Use icons, charts or maps only when they communicate verified information.
- Do not create a visually impressive map filled with guessed countries.
- Maintain the established responsive and accessible patterns from Documents 01–04.

9. Accessibility Requirements

- Exactly one H1 per page.
- Logical H2/H3 hierarchy.
- All interactive cards/links must have clear accessible names.
- Metrics must be understandable without relying on colour.
- Charts/maps must have text alternatives or equivalent accessible summaries.
- Do not communicate geography or impact exclusively through visual positioning.
- Visible keyboard focus states.
- Respect reduced-motion preferences.
- No horizontal overflow at the established test widths.

10. Empty-State Rules

Empty states are a deliberate product state, not a failure. They should communicate that information is pending from RBB without making the site appear broken.

Recommended pattern: a short heading, one sentence explaining that verified information is pending, and an optional link to a related populated section.

Examples:

“Where We Work information to be provided and reviewed by Rising Beyond Borders.”

“Impact stories to be provided and reviewed by Rising Beyond Borders.”

11. SEO & Metadata

- Create unique title/meta description content for /impact and its subpages.
- Do not put unsupported statistics or geographic claims into metadata.

- Use meaningful headings that describe the actual page content.
- Ensure empty-state pages still have useful metadata rather than generic placeholder titles.

12. Implementation Constraints

- Implement Document 05 only.
- Do not redesign the homepage, About Us or Our Work pages.
- Reuse existing components and design tokens where appropriate.
- Do not introduce a new UI framework.
- Do not add invented RBB content to make sections look complete.
- Keep the architecture data-driven and ready for verified content later.
- Do not build an admin/CMS in this phase.
- Do not add new external integrations unless already required by the existing site.

13. Claude Code Implementation Prompt

Paste the following prompt into Claude Code after attaching this PDF:

Implement Document 05 – Our Impact Master Specification for the Rising Beyond Borders website.

Treat this document as the authoritative specification for the Impact phase.

GOAL

Build the complete Our Impact information architecture and reusable data model without inventing NGO facts.

ROUTES

- /impact
- /impact/where-we-work
- /impact/our-approach

INTEGRATION

- Reuse the existing Our Work program data.
- Reuse the existing Stories architecture/data where possible.
- Reuse the existing About / Transparency architecture.
- Homepage impact metrics must consume the same shared impact data source where practical.

IMPACT DATA

The supplied RBB materials contain:

- 50K+ lives impacted
- 25 countries reached
- 200+ partners & donors worldwide

There is also a conflicting 120+ figure. DO NOT publish it until RBB clarifies what it represents.

All supplied metrics should be implemented as pending-review/source-supplied content, not silently presented as newly verified facts.

CONTENT SAFETY

Do not invent:

- countries
- projects
- beneficiaries
- outcomes
- percentages
- partners/donors
- testimonials
- quotes
- measurement methodology

- certifications, registrations, audits or legal claims
- historical campaigns

WHERE WE WORK

Create the complete page structure, but show an explicit RBB content placeholder until verified geography is supplied. Do not convert "25 countries reached" into guessed country names.

OUR APPROACH

Create the page structure around sustainable growth and lasting change, which are supported by the supplied RBB material. Do not present "Listen → Partner → Act → Sustain" as an official RBB methodology unless clearly marked as proposed/pending approval.

IMPACT STORIES

Connect to the existing Stories system. Only display approved stories. Empty states are acceptable.

MEASUREMENT

Create a future-ready section/data model for evidence and measurement, but do not invent a methodology.

DATA MODEL

Create a shared impact content source with:

- metrics
- program impact
- geography
- approach
- measurement
- story references
- report references

Include explicit editorial status in the data model where useful.

UX

Follow the existing RBB design system:

- Deep Trust Blue #10437C
- Bright Sky Blue #00ADEF
- Light Gray #F5F7FA
- White #FFFFFF
- Charcoal #3A3A3A
- Growth Green #5CB85C
- Satoshi typography

ACCESSIBILITY

Maintain one H1, logical headings, keyboard focus, accessible names, text alternatives for charts/maps, reduced-motion support, and no colour-only meaning.

RESPONSIVE QA

Test at 320, 375, 768, 1024, 1280 and 1440px.

Confirm no horizontal overflow.

VALIDATION

- production build passes
- no console errors/warnings
- no invented/inherited NGO claims
- no fake geography
- no placeholder test data left in production
- verify all new internal links
- verify direct loading of every new route

IMPORTANT

Do not redesign previous phases.

Do not start Document 06.

Do not add an admin/CMS.

Do not commit changes.

After implementation, return a concise implementation report covering:

1. routes changed
2. sections created
3. data/content files created or modified

4. components reused
5. components created
6. content requiring RBB approval
7. build result
8. responsive result
9. accessibility result
10. console result
11. scans for invented/inherited claims
12. remaining issues or decisions needed.

14. Approval Checklist

- Impact overview follows the defined section order.
- Impact metrics use a shared data source.
- 50K+, 25 and 200+ are represented consistently and marked for RBB verification.
- 120+ is excluded until clarified.
- Where We Work does not invent countries.
- Our Approach does not turn the proposed framework into an official methodology.
- Stories use the existing Stories architecture.
- Measurement content contains no invented methodology.
- Our Work and Stories data are reused rather than duplicated unnecessarily.
- No inherited NGO claims remain in production.
- Build passes with no errors/warnings.
- Responsive and accessibility checks pass.
- No temporary test data remains.

15. RBB Content Required After Implementation

- Verification of the headline impact figures.
- Definition/clarification of the 120+ figure.
- Verified country/region list and any approved map information.
- Approved description of the RBB approach.
- Approved impact measurement/evidence methodology.
- Program-specific impact metrics and outcomes.
- Approved impact stories and photography.
- Approved reports and transparency documents/links.

16. Phase Boundary

Document 05 establishes the Impact architecture and implementation foundation. It does not attempt to fill missing RBB evidence. Content enrichment should happen after RBB supplies and approves the required material.

Next phase after approval: Document 06 should be defined only after the Document 05 implementation report has been reviewed.
