

# Rising Beyond Borders

## Document 07 — Stories & Content Master Specification

**Purpose:** Define the Stories hub, story categories, story detail architecture, shared content model and future editorial foundation without inventing stories or publishing unsupported claims.

**Primary route:** /stories

**Future detail route:** /stories/:slug

**Related systems:** Our Work, Our Impact, Get Involved, About / Transparency

**Status:** Master specification for Claude Code implementation

### 1. Document Objective

Stories should give Rising Beyond Borders a credible editorial space for sharing approved news, field experiences, impact stories and community stories. The architecture must work correctly when there are zero stories and should become populated automatically as verified content is added.

The site must never create fictional stories, beneficiary experiences, quotations, locations, outcomes, dates, partners or photography simply to make the page look populated.

**Core rule:** Build the editorial system now; publish only RBB-approved content.

### 2. Information Architecture

| Route / Area      | Purpose                                         | Content state                                                 |
|-------------------|-------------------------------------------------|---------------------------------------------------------------|
| /stories          | Editorial hub and story discovery.              | Complete structure; empty state until approved stories exist. |
| /stories/:slug    | Individual story detail.                        | Template only until a real approved story exists.             |
| News & Updates    | Official updates and announcements.             | Category structure; content pending.                          |
| Field Stories     | Stories from RBB work and communities.          | Category structure; content pending.                          |
| Impact Stories    | Approved stories demonstrating outcomes/change. | Category structure; content pending.                          |
| Community Stories | Community-focused experiences and voices.       | Category structure; content pending.                          |

### 3. /stories — Stories Hub

**Section order:**

#### 01 — Hero

Editorial introduction to RBB stories.

#### 02 — Featured Story

Show one approved featured story when available; otherwise use an intentional empty state.

#### 03 — Browse Stories

Story cards/list driven by shared story data.

#### 04 — Browse by Type

News & Updates, Field Stories, Impact Stories and Community Stories.

#### 05 — Related Work

Connect stories to relevant Our Work program/project data where verified.

## 06 — Newsletter / Updates

Only an approved newsletter integration or a clearly non-functional placeholder; never a fake submission flow.

## 07 — Closing CTA

Connect to Get Involved / Our Work / Impact.

## Featured story behavior

- Only stories explicitly marked featured in the shared data should appear here.
- If there is no approved featured story, show an empty/pending state rather than selecting arbitrary or placeholder content.
- A story with a missing image must render safely using the established media placeholder.
- A missing excerpt/category should not crash the card or create broken visual hierarchy.

# 4. Story Categories

## News & Updates

Use for official RBB announcements, organizational updates and approved news. Do not invent organizational milestones, registrations, awards or partnerships.

## Field Stories

Use for approved accounts of RBB work in communities or program environments. Locations and activities must be verified.

## Impact Stories

Use for approved stories that demonstrate a documented change or outcome. Do not infer outcomes from general program descriptions.

## Community Stories

Use for approved community experiences and voices. Quotes, names, photographs and personal details require explicit approval from RBB.

# 5. Story Detail — /stories/:slug

Create one reusable detail template. It should render only the fields that exist on an approved story.

## 01 — Story Hero

Title, category, date if approved, optional image.

## 02 — Story Introduction

Approved summary/dek.

## 03 — Story Body

Rich editorial content supplied/approved by RBB.

## 04 — Context / Location

Only verified information; omit if unavailable.

## 05 — Related Work

Program/project references from shared verified data.

## 06 — Impact / Outcome

Only documented and approved outcomes.

## 07 — Media

Approved images/media with appropriate captions/alt text.

## 08 — Related Stories

Approved related content from the shared story collection.

## 09 — Closing CTA

Relevant next step.

# 6. Story Data Model

Create a single source of truth for stories. Recommended model:

```
story = {  
  id,  
  slug,  
  title,  
  excerpt,  
  category,  
  date,  
  author,  
  featured,  
  image,  
  body,  
  location,  
  programId,  
  projectId,  
  impact,  
  quotes,  
  media,  
  relatedStoryIds,  
  status  
}
```

Not every field is required. The UI must gracefully handle missing optional fields.

Use internal editorial status such as **draft**, **pending-review**, **approved** and **archived** if useful. Internal status must not be exposed to visitors.

# 7. Relationship With Other Phases

- Our Work remains the source of truth for program/project references.
- Our Impact should reference story IDs rather than duplicating story content.
- Homepage Stories of Change should consume the same approved story data.
- Get Involved should not create separate story content.
- About / Transparency may link to approved reports, but reports are not automatically stories.
- A story can reference a program or project only when that relationship is verified.

# 8. Empty States

Empty states are required because RBB has not yet supplied an approved story catalogue.

Recommended hub message: “Stories and updates to be provided and reviewed by Rising Beyond Borders.”

Recommended detail behavior: an unknown slug returns the site's standard not-found page. Do not render fabricated placeholder stories at arbitrary slugs.

The category areas should also handle zero results gracefully.

# 9. Content Governance & Privacy

- No fabricated beneficiary stories.
- No fabricated testimonials or quotations.
- No invented names, ages, occupations, family details or personal histories.
- No precise locations unless RBB has approved them for publication.
- No sensitive personal information.
- No medical, financial, educational or livelihood outcomes without approved evidence.
- Images must be supplied/approved by RBB and have appropriate usage permission.
- Captions and alt text must describe the approved image accurately; do not infer identities or circumstances.

## 10. Editorial UX

- Story cards should prioritize title, category and excerpt/date when available.
- Do not force every card to contain an image.
- Category filters should appear only when there is enough approved content to make filtering useful; the architecture may support them now but must not create empty decorative controls.
- Search should not be added unless the story volume justifies it; keep the data model ready for it.
- Featured content must be explicitly data-driven.
- Pagination/infinite scroll should be added only if the approved story volume requires it.

## 11. Newsletter Boundary

The existing site contains newsletter forms that do not currently send data. Document 07 should not connect them to an external provider unless RBB approves the provider, privacy language, subscription process and data handling.

For this phase, either retain an explicit non-functional placeholder where already required by the existing architecture or remove/rework the form only if the implementation reveals that it creates a misleading submission experience. Do not claim that a subscription was completed when no service received it.

## 12. Design & Accessibility

- Continue the established RBB visual system: #10437C, #00ADEF, #F5F7FA, #FFFFFF, #3A3A3A and #5CB85C.
- Continue Satoshi typography.
- Use editorial hierarchy and readable line lengths for story detail pages.
- One H1 per page with logical H2/H3 hierarchy.
- Keyboard-accessible cards, filters and links.
- Visible focus indicators.
- Images require meaningful alt text or decorative treatment when appropriate.
- Quotes must remain readable and not depend on colour alone.
- Respect reduced motion.
- No horizontal overflow at 320, 375, 768, 1024, 1280 and 1440px.

## 13. SEO & Metadata

- Each story should have a unique title and description when approved content exists.

- The story slug should be stable and readable.
- Do not generate SEO metadata from invented content.
- If structured data is implemented, only use fields supported by the approved story.
- Unknown slugs should use the site's normal not-found behavior.

## 14. Implementation Constraints

- Implement Document 07 only.
- Do not redesign Homepage, About Us, Our Work, Our Impact or Get Involved.
- Reuse existing components and design tokens.
- Do not create an admin/CMS/editor.
- Do not invent stories for visual completeness.
- Do not add third-party newsletter integrations.
- Do not add search/filter/pagination controls merely for appearance when there is no data.
- Do not start Document 08.

## 15. Claude Code Implementation Prompt

Attach this PDF to Claude Code and run the following prompt:

Implement Document 07 – Stories & Content Master Specification for Rising Beyond Borders.

Treat this PDF as the authoritative specification for the Stories phase.

### ROUTES

Build:

- /stories
- /stories/:slug

Use the existing Stories route and navigation architecture where present. Do not create duplicate story hubs.

### GOAL

Create a professional editorial system that works with zero stories and automatically supports approved stories when RBB supplies them.

### CATEGORIES

Support:

- News & Updates
- Field Stories
- Impact Stories
- Community Stories

### DATA

Create one shared story data source with a documented story model:

id, slug, title, excerpt, category, date, author, featured, image, body, location, programId, projectId, impact, quotes, media, relatedStoryIds, status.

Optional fields must not break cards or detail pages.

### INTEGRATION

- Homepage Stories of Change should consume the same story data where practical.
- Impact Stories should reference story IDs.
- Our Work relationships should use program/project IDs.
- Do not duplicate full story records across pages.

### CONTENT RULES

Do not invent:

- stories
- people
- beneficiary names
- quotes
- locations
- dates
- partners
- outcomes
- statistics
- testimonials
- photography
- sensitive personal details

Until RBB supplies approved stories, use intentional empty states.

#### FEATURED

Only explicitly featured approved stories may appear in Featured Story.

#### DETAIL TEMPLATE

Create one reusable /stories/:slug template. Render only fields that exist. Unknown slugs use the existing NotFound behavior.

#### NEWSLETTER

Do not connect an external newsletter provider in this phase.

Do not create a fake successful subscription state.

If an existing newsletter form remains, make sure it does not falsely claim that data was submitted.

#### DESIGN

Use the established RBB design system:

Deep Trust Blue #10437C

Bright Sky Blue #00ADEF

Light Gray #F5F7FA

White #FFFFFF

Charcoal #3A3A3A

Growth Green #5CB85C

Satoshi typography

#### ACCESSIBILITY

One H1, logical headings, visible focus, keyboard access, accurate alt text, no colour-only meaning, reduced-motion support.

#### RESPONSIVE QA

Test 320, 375, 768, 1024, 1280 and 1440px. No horizontal overflow.

#### VALIDATION

- production build passes
- no console errors/warnings
- no invented/inherited NGO content
- no fabricated stories or test stories
- unknown story slugs return NotFound
- all new routes load directly
- internal links work
- no misleading newsletter submission behavior
- no temporary test data

#### IMPORTANT

Do not redesign previous phases.

Do not add a CMS/admin.

Do not add an external newsletter integration.

Do not start Document 08.

Do not commit changes.

After implementation return a concise report covering:

1. routes changed
2. sections created
3. story data/content files created or modified
4. components reused
5. components created

6. story categories implemented
7. content requiring RBB approval
8. newsletter handling
9. build result
10. responsive result
11. accessibility result
12. console result
13. scans for invented/inherited content
14. remaining issues/decisions.

## 16. Approval Checklist

- /stories follows the defined hub architecture.
- A reusable /stories/:slug detail template exists.
- All four story categories are represented without requiring fake content.
- The story data model is shared.
- Homepage and Impact story references can use the shared data.
- No fabricated stories, people, quotes, outcomes or locations exist.
- Featured Story appears only when explicitly approved/featured content exists.
- Missing images/excerpts/categories do not break cards.
- Unknown story slugs use NotFound.
- Newsletter does not falsely claim successful submission.
- Build, responsive, accessibility and console checks pass.
- No temporary test stories remain.

## 17. RBB Content Required After Implementation

- Approved stories and titles.
- Category for each story.
- Approved dates/authors where applicable.
- Approved story body and excerpts.
- Approved images, captions and usage permissions.
- Verified locations where appropriate.
- Verified program/project relationships.
- Documented impact/outcomes where applicable.
- Approved quotations and attribution.
- Approved related-story relationships.
- Newsletter provider/process if RBB wants newsletter functionality.

## 18. Phase Boundary

Document 07 establishes the editorial foundation. It does not create an editorial CMS, invent stories or connect newsletter infrastructure. Approved content and future content operations can be layered onto this architecture later.

**Next phase after approval:** Document 08 should be defined only after the Document 07 implementation report has been reviewed.
