

# Rising Beyond Borders

## Document 24 — Final Content Replacement & Production Readiness

Master Specification + Claude Code Implementation Prompt

**Purpose:** Move the complete staging/demo website into a controlled production-content-ready release candidate by replacing temporary material with RBB-approved content, assets and configuration.

### 1. Phase Objective

Document 23 made the full experience visible. This phase replaces demo material with final RBB-approved material and prepares a production release candidate. This is not a redesign phase.

### 2. Source-of-Truth Rule

Use only material supplied or explicitly approved by Rising Beyond Borders. Do not infer missing facts from demo content, inherited pages, stock imagery or general NGO conventions. Missing facts remain pending.

### 3. Replacement Order

Replace in this order: organization identity; mission/vision; programs; impact figures; team/governance; projects/geography; stories; contact; donation; forms/email; policies; images/licensing; SEO/social metadata; hosting/providers; final QA.

### 4. Core RBB Content

Confirm the final approved wording for Mission: “Empower vulnerable communities with resources, support and opportunities for sustainable growth and lasting change.” Vision: “A world beyond borders where compassion unites people and every individual can thrive in a safe, inclusive and equitable society.” Preserve these unless RBB explicitly changes them.

### 5. Impact Data

Verify 50K+ lives impacted, 25 countries reached and 200+ partners & donors worldwide before production publication. Do not reintroduce the previously excluded 120+ figure without explicit clarification. Verify 2026 financial shares: Programs & Services 78%, Fundraising 12%, Administration 10%.

### 6. Programs

Replace staging program material for Education, Health & Wellbeing, Livelihoods and Community Support with approved descriptions, projects, impact claims and imagery.

### 7. Team & Governance

Replace fictional demo people with approved team/leadership records. Confirm names, roles, bios, photos, alt text, ordering and governance relationships. Remove every demo identity from production.

### 8. Projects & Geography

Replace demo projects and Demo country A–F records with approved projects and geographic coverage. Confirm program, location, status, impact, partners and imagery. If data is unavailable, do not retain demo facts in production.

### 9. Stories

Replace demo stories with approved News & Updates, Field Stories, Impact Stories and Community Stories. Confirm title, slug, date, author, body, quotes, imagery, location and program/project relationships.

## 10. Contact Details

Replace example.org, 555 numbers and all staging contact values with RBB-approved email, phone, office/location, social, hours and response-time information.

## 11. Forms & Resend

Confirm final fields, privacy consent, success/error messages, recipient addresses, sender/from domain, acknowledgements, newsletter confirmation/unsubscribe, anti-spam, rate limiting and log retention. Run real staging delivery before production.

## 12. Donations & Razorpay

Confirm Razorpay production account, test/live credentials, webhook secret, automatic capture, currency, amounts, custom amount rules, donor fields, designation, donor wording, internal recipient, refund wording and privacy wording. Run real Razorpay test flows before live activation. Never commit credentials.

## 13. Legal & Policies

Replace demo Privacy, Terms, Accessibility and Cookies content with RBB-approved text, dates and contact references. Do not publish demo policy text as final policy.

## 14. Images & Licensing

Create a final image inventory. Replace temporary Pexels images with RBB-approved imagery where available. For retained third-party imagery record source, licence/permission basis, creator and required attribution. Resolve the flagged drinking-water image. Remove unused demo assets.

## 15. Financial & Transparency

Replace demo reports/documents with real RBB-approved documents. Do not invent audit, registration, tax, certification or monetary claims.

## 16. SEO & Social Metadata

Review titles, descriptions, canonicals, Open Graph/Twitter data, robots, images and structured data. Remove staging noindex only for approved production pages. Keep incomplete records out of sitemap and structured data.

## 17. Production Configuration

Confirm production domain, host, HTTPS, redirects, headers, HSTS, CSP, caching, error pages, environment variables, email provider, Razorpay configuration and any approved analytics/Search Console.

## 18. Demo Removal Gate

Production must fail or block release if demo text, demo figures, fictional team names, example.org/555 values, demo policies, staging banner, staging-only routes, test Razorpay identifiers, email previews, secrets or unapproved demo assets remain.

## 19. Production Content Validation

Extend the existing validator to verify required production fields, approved statuses, references, images, unique routes/slugs, safe URLs, absence of demo markers, absence of staging-only modules and absence of test credentials. A failure stops the production build.

## 20. Release Candidate

Use the normal production build, never build:staging. Inspect HTML, JS, assets, sitemap, robots.txt, redirects and build metadata. Verify only approved content is bundled.

## 21. Final QA Matrix

Run full route crawl, hydration, console scan, CSP, security headers, secret scan, dependency audit, axe, keyboard navigation, 320/375/640 widths, 200% zoom, reduced motion, forms E2E, Resend staging delivery, Razorpay test E2E, webhook/verification, sitemap/robots/canonical checks, broken-link/image checks and demo-content scan.

## 22. Release States

Use explicit states: CONTENT-INCOMPLETE; STAGING-READY; PRODUCTION-CONTENT-READY; PRODUCTION-INTEGRATION-READY; RELEASE-READY. Technical tests alone must not declare a release ready while RBB approvals remain unresolved.

## 23. Final Content Freeze

After RBB approves the release candidate, freeze content during final QA. Any post-freeze content change requires the relevant validation and QA checks again. Record a non-sensitive content/build revision.

## 24. Post-Launch Workflow

Continue the approved content workflow after launch. Do not introduce a CMS/admin/database merely to solve content replacement.

## 25. Claude Code Implementation Prompt

Implement Document 24 for Rising Beyond Borders.

### OBJECTIVE

Convert the completed staging/demo website into a production-content-ready release candidate by replacing temporary demo content with RBB-approved content and enforcing a final production readiness gate.

### DO NOT REDESIGN

Reuse the existing architecture from Documents 01-23. Do not introduce a CMS, admin dashboard, database or new framework unless a verified requirement makes it unavoidable.

### SOURCE CONTROL

1. Use only supplied/approved RBB content for production.
2. Do not infer missing facts.
3. Keep unresolved fields pending rather than inventing them.
4. Preserve approved Mission/Vision wording unless RBB explicitly changes it.

### REPLACE

demo text; demo figures; demo team members; demo projects; demo countries/locations; demo stories; demo contact values; demo policies; staging banners; unapproved temporary images; staging-only configuration.

### IMPACT

Verify 50K+, 25 and 200+ before production publication. Do not reintroduce 120+ without explicit clarification. Verify 78/12/10 before production publication.

### FORMS

Configure approved Resend sender/recipients and run staging delivery. Keep secrets server-side. Confirm privacy/consent and newsletter unsubscribe/confirmation behavior.

### DONATIONS

Configure Razorpay test credentials first. Run real test flows. Verify signature, order/payment matching, webhooks and idempotency. Only then configure live credentials. Never commit secrets. Do not claim tax receipts, refund policy or donation purpose without approved wording.

### IMAGES

Replace temporary Pexels assets with approved RBB assets where available. Maintain the licensing/source inventory. Resolve the flagged drinking-water image. Remove unused demo assets.

### SEO

Review titles/descriptions/canonicals/social metadata. Remove staging noindex only for approved production pages. Keep incomplete content out of sitemap and structured data.

### SECURITY

Run secret scan, dependency audit, CSP and production artifact inspection. Do not weaken security.

### FINAL VALIDATOR

Fail the production release when demo markers, staging-only routes, test credentials, demo assets, staging banners, preview files or known placeholder contact values exist in production output.

### BUILD

Use the normal production build, not build:staging.

### QA

Run all relevant tests from Documents 01-23 plus the production content gate.

### DO NOT STAGE OR COMMIT.

### REPORT

Return:

1. content replaced
2. content still missing
3. RBB approvals required
4. images replaced/remaining
5. forms status
6. Razorpay test status
7. Resend test status
8. production build results
9. demo-leak scan
10. accessibility/security/performance results
11. files changed
12. working-tree/staging status
13. exact blockers preventing RELEASE-READY.

## 26. RBB Approval Matrix

| Area           | Approval required                                           |
|----------------|-------------------------------------------------------------|
| Core identity  | Name, mission, vision, final positioning                    |
| Impact         | 50K+, 25, 200+ and any other published figures              |
| Financials     | 78/12/10 and actual reports/documents                       |
| Programs       | Final descriptions, projects and impact claims              |
| Team           | Names, roles, bios, photos and governance                   |
| Geography      | Countries/locations actually served                         |
| Stories        | Final text, quotes, authors, dates and imagery              |
| Contact        | Email, phone, office, social and hours                      |
| Forms          | Fields, consent, recipients, acknowledgement wording        |
| Donation       | Currency, amounts, donor fields, wording, Razorpay settings |
| Email          | From domain, sender, recipients and newsletter process      |
| Policies       | Privacy, Terms, Accessibility, Cookies                      |
| Images         | Ownership/licensing/permissions                             |
| Infrastructure | Domain, host, redirects, headers, scripts                   |

**Release rule:** Technical completion does not equal RBB approval. The release candidate remains blocked while required organization-specific content, legal text, provider configuration, licensing or approvals are missing.
